

# Electric Toilet Operation

## Rules of Engagement

1. Marine toilets are easily blocked due to incorrect items being flushed.
2. Only use small amounts of toilet paper.
3. Do not put synthetic wipes, cotton hankies or hair in bowl which will get jammed in the macerator pump. Clearing these blockages requires dismantling the toilet and pump. A lengthy unpleasant job for the skipper.
4. If in a marina the bowl is flushed into holding tanks which are emptied at sea.

## Flushing Toilet Instructions

1. Press top toggle switch and the toilet bowl will flush contents with seawater and empty the bowl but always leaves clean salt water in the bowl.
2. The bottom toggle switch is not used except for routine maintenance. To fill bowl with salt water press on the left side. The right side button completely flushes the bowl.
3. Spray blue deodorant into bowl water being careful not to spray seat as the blue cleaning product stains the seat.
